

ACCTG 2200: Q&A Ch. 5

Dr. Morris

HKUST

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes
 - ▶ an hour of labor

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes
 - ▶ an hour of labor
 - ▶ a dollar of revenue

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes
 - ▶ an hour of labor
 - ▶ a dollar of revenue
- ▶ There is always some unit that makes everything step or fixed

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes
 - ▶ an hour of labor
 - ▶ a dollar of revenue
- ▶ There is always some unit that makes everything step or fixed
 - ▶ When a table is in multiples of 10 you can treat a batch of 10 as the base unit.

The choice between step, step-variable, and variable costs

- ▶ Requires a definition of a 'unit'
 - ▶ a pair of shoes
 - ▶ an hour of labor
 - ▶ a dollar of revenue
- ▶ There is always some unit that makes everything step or fixed
 - ▶ When a table is in multiples of 10 you can treat a batch of 10 as the base unit.
 - ▶ Step-variable are hard to identify from data, but are usually bundled goods.

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice
- ▶ This is determined by the production process

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice
- ▶ This is determined by the production process
 - ▶ A highly automated factory has high fixed-costs, because costs do not vary with units produced.

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice
- ▶ This is determined by the production process
 - ▶ A highly automated factory has high fixed-costs, because costs do not vary with units produced.
 - ▶ An industry where raw materials are expensive has high variable costs, because costs vary with each unit produced.

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice
- ▶ This is determined by the production process
 - ▶ A highly automated factory has high fixed-costs, because costs do not vary with units produced.
 - ▶ An industry where raw materials are expensive has high variable costs, because costs vary with each unit produced.
- ▶ Cost behavior determines whether we treat the cost as fixed or variable.

Does use of “fixed”, “variable”, or “step” vary by industry

- ▶ Yes.
- ▶ ... but this is **not** an accounting system choice
- ▶ This is determined by the production process
 - ▶ A highly automated factory has high fixed-costs, because costs do not vary with units produced.
 - ▶ An industry where raw materials are expensive has high variable costs, because costs vary with each unit produced.
- ▶ Cost behavior determines whether we treat the cost as fixed or variable.
- ▶ Managers can choose how to design their production process, but they do not choose whether a cost is fixed or variable.

Internal information systems:

- ▶ There are at least three key accounting systems:

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)
 - ▶ Managerial Accounting

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)
 - ▶ Managerial Accounting
 - ▶ The MA system will be the most detailed (ABC requires much more information than GAAP)

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)
 - ▶ Managerial Accounting
 - ▶ The MA system will be the most detailed (ABC requires much more information than GAAP)
- ▶ All three use cost and revenue data, and should share information.

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)
 - ▶ Managerial Accounting
 - ▶ The MA system will be the most detailed (ABC requires much more information than GAAP)
- ▶ All three use cost and revenue data, and should share information.
- ▶ The terms “bookkeeper” and “accountant” are often used interchangeably.

Internal information systems:

- ▶ There are at least three key accounting systems:
 - ▶ Tax Accounting
 - ▶ Financial Accounting (for public companies)
 - ▶ Managerial Accounting
 - ▶ The MA system will be the most detailed (ABC requires much more information than GAAP)

“Is there a situation where the high-low method is preferable?”

- ▶ If you are shipwrecked on a desert island.

“Is there a situation where the high-low method is preferable?”

- ▶ If you are shipwrecked on a desert island.
- ▶ After the apocalypse.

“Is there a situation where the high-low method is preferable?”

- ▶ If you are shipwrecked on a desert island.
- ▶ After the apocalypse.
- ▶ An Introduction to Managerial Accounting class.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.
 - ▶ Creates an incentive to overproduce.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.
 - ▶ Creates an incentive to overproduce.
 - ▶ This only works in the short term.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.
 - ▶ Creates an incentive to overproduce.
 - ▶ This only works in the short term.
 - ▶ Auditors and short sellers are always looking for evidence of this.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.
 - ▶ Creates an incentive to overproduce.
 - ▶ This only works in the short term.
 - ▶ Auditors and short sellers are always looking for evidence of this.
- ▶ Absorption costing ignores the fact that we have to pay for fixed costs when the bills are due not when we sell our products.

When do absorption costing and variable costing differ?

- ▶ When there is a change in ending inventory.
- ▶ Absorption costing is *required* for financial accounting.
 - ▶ We treat inventory as an asset.
 - ▶ Essential to estimating the **value** of the firm.
 - ▶ GAAP is focused on valuation.
 - ▶ Creates an incentive to overproduce.
 - ▶ This only works in the short term.
 - ▶ Auditors and short sellers are always looking for evidence of this.
- ▶ Absorption costing ignores the fact that we have to pay for fixed costs when the bills are due not when we sell our products.
- ▶ Variable costing is much more useful for internal decisions, especially so that we know when to get external financing.

Depreciation:

- ▶ Variable costing does not use depreciation.

Depreciation:

- ▶ Variable costing does not use depreciation.
- ▶ We expense FC in the period we pay for them.

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*
- ▶ In absorption costing, depreciation is a fixed cost and a period cost.

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*
- ▶ In absorption costing, depreciation is a fixed cost and a period cost.
 - ▶ We use depreciation to assign the FC to a period's MOH account.

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*
- ▶ In absorption costing, depreciation is a fixed cost and a period cost.
 - ▶ We use depreciation to assign the FC to a period's MOH account.
 - ▶ Within the period we assign using a cost driver.

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*
- ▶ In absorption costing, depreciation is a fixed cost and a period cost.
 - ▶ We use depreciation to assign the FC to a period's MOH account.
 - ▶ Within the period we assign using a cost driver.
 - ▶ Note that treating depreciation as a variable cost will lead to incorrect information.

Depreciation:

- ▶ Variable costing does not use depreciation.
 - ▶ We expense FC in the period we pay for them.
 - ▶ If we finance FC with a loan then we expense each loan *payment*
- ▶ In absorption costing, depreciation is a fixed cost and a period cost.
 - ▶ We use depreciation to assign the FC to a period's MOH account.
 - ▶ Within the period we assign using a cost driver.
 - ▶ Note that treating depreciation as a variable cost will lead to incorrect information.
 - ▶ Depreciation is **NOT REAL**

PB5-3

I've updated the solution.
